**Factory settings**

Output signals	Minimum output limit	Maximum output limit	Sensor error alarm output
4 ... 20 mA	3.8 mA	23 mA	3.6 mA, non-locking
20 ... 4 mA	23 mA	3.8 mA	3.6 mA, non-locking
0 ... 10 V	0.0 V	10.5 V	0 V, non-locking
1 ... 5 V	0.9 V	5.5 V	0.9 V, non-locking
0 ... 5 V	0.0 V	5.5 V	0 V, non-locking
0.5 ... 4.5 V	0.4 V	5.0 V	0.4 V, non-locking

Operating voltage range:  
11 ... 35 VDC with current output  
14 ... 35 VDC with voltage output 0 ... 10V  
9 ... 35 VDC with voltage output 1 ... 5V / 0 ... 5V / 0.5 ... 4.5V  
Disconnect the system from power prior to connecting the device.

Note on electromagnetic compatibility: Shielded supply cable is recommended. Ground the cable shield on both sides over a large surface and ensure potential equalization.

Betriebsspannungsbereich:  
11 ... 35 VDC mit Stromausgang  
14 ... 35 VDC mit Spannungsausgang 0 ... 10V  
9 ... 35 VDC mit Spannungsausgang 1 ... 5V / 0 ... 5V / 0,5 ... 4,5V  
Vor dem Anschliessen des Geräts die Anlage spannungsfrei schalten.

Hinweis zur elektromagnetischen Verträglichkeit: Geschirmtes Anschlusskabel empfohlen. Kabelschirm beidseitig, großflächig erden und Potentialausgleich sicherstellen.

Plage d'alimentation:  
11 ... 35 VDC avec sortie courant  
14 ... 35 VDC avec sortie tension 0 ... 10V  
9 ... 35 VDC avec sortie tension 1 ... 5V / 0 ... 5V / 0,5 ... 4,5V  
Mettez l'installation hors tension avant de raccorder l'appareil.

Remarque concernant la compatibilité électromagnétique : câble de connexion blindé recommandé. Effectuer une mise à la terre sur une grande surface aux deux extrémités du blindage du câble et assurer la liaison équipotentielle.

  - General information insert (11042373)

**Quick Start Guide applicability**

The present Quick Start Guide applies the following products:

- PP20S industrial

**Function principle**

The sensor is used for pressure measurement. The measured pressure is output as an electrical signal.

**Preventive maintenance**

The sensor is maintenance-free. No special preventive maintenance is required. Regular cleaning and regular checking of the plug connections are recommended.

**Installation**

**Security**

**WARNING**

**Destruction of the device by excessive pressure!**  
Exceeding the burst pressure, even shortly, may destroy the device.

a) Avoid any excessive pressure by taking the appropriate actions (see operating conditions).

- Ensure that both pressure and nature of the fluid to be measured are compatible with the sensor. The fluid must be compatible with stainless steel 1.4404 (AISI 316L) resp. 1.4301 (AISI 304), ceramic 96% AL2O3 as well as with the nature of the seal.
- Only use the sensor in fluids it is intended for. Prior to commissioning, make sure the measuring fluid does not require material for potentially explosive atmospheres. Mounting a non-intrinsically safe sensor is strictly prohibited for such fluids.
- The fluid must not freeze inside the sensor. Do not insert any rigid elements into the opening of the pressure connection, since they may destroy the diaphragm.
- The mounting position has no influence on the measuring operation. We recommend protecting the device against strong environmental impacts such as pressure pulsation, water hammer, vibration, shocks, heat sources, electric and magnetic fields, lightning, humidity and bad weather.
- Make sure the connection is tight. The sealing surface must be clean and use an appropriate gasket.

**Installation instructions**

- Any assembly or disassembly work must be performed when the device is not live and not under pressure.
- Check the sensor for damage.
- In case of any claim please contact the responsible sales unit.

**Mounting the pressure transmitter**

**Condition:**

- All sealing surfaces are clean and free from damage.
- Ambient and medium temperatures are within the performance limits of the sensor (see data sheet).

**Instruction:**

- Mount the sensor with the tightening torque recommended in the table. Observe the correct sealing of the pressure connection.
- For tightening use a 22 mm, 27 mm or 32 mm hexagonal wrench (according to pressure connection).

Pressure connection	BCID	Tightening torque [Nm]
G1/4 B EN 837-1	G30	20 ... 40
G1/2 B EN 837-1	G31	20 ... 40

Front flush		

**Sealing the pressure connection**

**Pressure connection G1/4A DIN 3852-E**

**Instruction:**

- Use a flat gasket for the sealing surface (1).

**Pressure connection G1/2A DIN 3852-E**

**Instruction:**

- Use a flat gasket for the sealing surface (1).

**Pressure connection G3/4A DIN 3852-E Front flush**

**Instruction:**

- Use a flat gasket for the sealing surface (1).

**Pressure connection 1/4-18 NPTF**

**Instruction:**

- Wrap the thread with sealing material (e.g. PTFE tape) (1).

**Pressure connection G1/4 B EN 837-1**

**Instruction:**

- Seal the pressure connection at your own discretion.

**Pressure connection G1/2 B EN 837-1**

**Instruction:**

- Seal the pressure connection at your own discretion.
